

Prevent adhesive degradation, and minimize waste associated with roller applications

Reduce adhesive usage and ensure consistent glue volume with our integrated grammage control

Apply EVA, PO or PUR hot melts

Valco Melton's hot melt application systems for panel wrapping are an excellent choice for anyone looking to improve the efficiency and quality of their production processes. With a complete range of adhesive dispensing solutions and a focus on minimizing waste and downtime, these systems offer an ideal combination of performance and efficiency.

Our hot melt applicators ensure an overall superior quality product by providing precise control over adhesive application. This eliminates the risk of uneven coating or other defects that can compromise the quality of the finished product. The panel wrapping process is completed to the highest possible standard, leading to increased customer satisfaction.

FlexWrapp Series Adjustable Width Applicators

- Width regulation system up to 1300mm - bilateral, independent, and with one or two operational sides
- Motorized width regulation linked to grammage control available as an option
- Prevent burns and damage on the substrate. Approach Band System ensures uniform contact of wrap against head and kicks-out when machine stops.

IsoMelt PUR Melters

- Highest melting rates in the industry
- Ideally suited for PUR, allows quick and easy changes to other types of adhesives
- Faster and safer cleaning and maintenance with tiltable tank and removable grid
- Integrated grammage control

FlexDrum 200L Drum Unloaders

- Achieve melting rates that exceed other industry standards by up to 30%
- Main machine communication protocols Modbus TCP and Ethernet
- Integrated grammage control
- Integrated width regulation for FlexWrapp Series Adjustable Width Applicators
