

08 SERIES

Cold Glue Adhesive Dispensing Valve

Valco Melton's 08 Series Valve is a pneumatically operated, high-performance glue valve for contact or non-contact extrusion application. The design of the valve ensures a very high cycle rate and cycle life. The 08 valve provides millions of cycles before servicing is necessary. The 08 series valve can handle high fluid pressure and a range of fluid viscosity from 500 to 20,000 c/s. An assortment of application nozzles and adapters allows the 08 Series Valve to be used in a wide variety of applications including folding carton, corrugated lap gluing, cartoning "sift-proof" and insect-proof gluing, window gluing, ribbon patterns, coating, and many other high speed applications without limitation in viscosity.

- Designed for use with high-viscosity adhesives and or high-pressure applications
- Air-opened/spring closed design may be used with any three way solenoid air valve
- Can be adapted to NPT glue input for use with low-pressure poly or reinforced vinyl tubing
- Longer life for dotting applications
- Available with low restriction engineered ceramic nozzle for improved restart
