

900 SERIES

Cold Glue Adhesive Dispensing Valve

Boardrunner® Non-Contact and Contact Extrusion Gluing Stations feature the all-electric 900 Series Glue Valve for the absolute best in adhesive deposition performance. The valve provides unparalleled high speed performance with over 250 million cycles before major maintenance is needed. The impact-resistant carbide plunger tip and engineered ceramic seat leads the industry in durability. The 900 valve's powerful coil results in extremely accurate and repeatable glue patterns in contrast to pneumatically activated extrusion valves. High-pressure capabilities ensure the 900 Series Valve is compatible with any adhesive including high-viscosity formulas. The 900 Series still uses Valco Melton's unique quick-disconnect feature for applicator head connection and glue hose connection. Hardened tool steel titanium coated applicator heads are available in various pattern widths and feature quick disconnects for fast changeovers.

- Powerful, high-speed coil for glue viscosities up to 6000 c/s
- Very large flow orifices for use with low-pressure systems
- Carbide ball and ceramic seat design for maximum life
- Extremely accurate and repeatable glue patterns compared to pneumatically activated valves
- Available with low restriction engineered ceramic nozzle for improved restart
